# Gio Ferreras

0920 275 5196 | gioferreras@gmail.com | LinkedIn | GitHub

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, TypeScript, Dart, Flutter
**Frontend:** React.js, Next.js, Tailwind CSS
**Backend:** Node.js, Prisma ORM, JWT Authentication
**Database & Cloud:** PostgreSQL, Vercel, Firebase
**Tools & Technologies:** Git, GitHub, Figma, Streamlit
**Data Science & ML:** NumPy, Pandas, Scikit-learn, ONNX

## SUMMARY

Computer Science student developing full-stack web applications and machine learning models and systems using Python, Next.js, TypeScript, PostgreSQL, and modern cloud deployment tools like Vercel. Experienced in building database-backed applications, responsive interfaces, authentications systems, and collaborating in teams.

## EXPERIENCE

**Inari Amertron Inc. | Clark Freeport, Angeles City, Pampanga** **June 2026 - July 2026**
***MIS Developer Intern***

- Redesigned and modernized a document tracking system used by the company while maintaining the familiar system flow.
- Applied SDLC to identify software gaps and usability issues to improve upon.
- Presented the proposed redesign of the document tracking system to department heads and engineers to verify

## EDUCATION

**Angeles University Foundation | Angeles City, Pampanga** **2023 - Expected 2027**
***B.S. in Computer Science, Major in Data Science***

- **Scholarships:** DOST-SEI Merit
- **Honors:** College & University Scholar
- **Coursework:** Software Engineering, Object-Oriented Programming, Information Management, Human-Computer Interaction, Mobile Development, Agentic AI, and Technopreneurship

## ACTIVITIES & RECOGNITION

- Bootcamp participant – National AI Prompt Design Challenge (2025) by Capabara
- Hackathon participant – RAITE (2025)
- Hackathon team lead – Presidential Hackathon International Track

## CERTIFICATIONS

- Cisco Introduction to Data Science
- Cisco Introduction to Cybersecurity
- GCI World April by Matsuo-Iwasa Labs on fundamental theories and implementation of data science (2026)

## PORTFOLIO

**InstaHAM |** Github **September 2026**

*YOLO, GhostNet, ONNX, XGBoost, Flutter, Dart, C++, Python*

- Researched and created a mobile-based computer vision app that estimates live pig weight and health from RGB images
- Selected for presentation and publication in the SOICT 2026 proceedings in Ho Chi Minh City, Vietnam
- Trained and fine-tuned machine learning models, finding the most optimal combinations of models for image segmentation, health classification, and weight estimation through rigorous testing
- Converted most optimal combination of models from Python to C++ and deployed a lightweight app through Flutter
- Collaborated within a 4-person team using Git workflows and the native Flutter build to deploy prototypes

**Stray on Track |** Figma **May 2026**

*Figma, UI/UX*

- Designed an interactive mobile app prototype focused on helping track and take care of stray animals around Angeles City
- Created user flows, wireframes, and high-fidelity UI using Figma
- Lead a 4-person design team and contributed significantly in creating a shared style and component system

**Pop Hop |** Github **|** Website **April 2026**

*Next.js, TypeScript, Prisma, PostgreSQL, JWT, Tailwind CSS, Vercel*

- Built a full-stack flea market management web application for organizers and vendors, featuring booth allocation, management dashboard, and integrated chat functionality
- Implemented JWT-based RBAC authentication and PostgreSQL database using Prisma ORM
- Collaborated within a 4-person team using Git workflows and deployed the project via Vercel

**Style Finder |** Github **April 2026**

*Python, Streamlit, Gaussian Mixture Model, HuggingFace Dataset*

- Developed an outfit recommendation system using a Gaussian Mixture Model trained on the Polyvore Outfits dataset from HuggingFace
- Built a Streamlit-based interface that analyzes color and texture features from uploaded clothing images to generate stylistically similar outfits
- Collaborated within a 4-person team to train and deploy the project

**PTF04 Portfolio |** Github **|** Website **May 2026**

*Next.js, React, Node.js, TypeScript, Tailwind CSS*

- Designed and developed a personal portfolio containing full-stack and machine learning projects
- Built responsive frontend interfaces using React and Tailwind CSS, and then Node.js and TypeScript for the backend architecture
- Deployed the project via Vercel
